Of course, this doesn't guarantee that you will be able to determine your iDrive version with 100% accuracy, because in some countries the production month can be different. But at least you'll have some understanding which head unit can be in your BMW.

2. By the interface

The majority of iDrive systems have specific interfaces, so it's also worth checking out the look of the menu in comparison with other head units to identify the iDrive version.
